

Refresh ImageManager .mdb file

The information about the consolidation status, replication status etc. is stored within an access database called ImageManager.mdb and it's located in the "C:\Program Files (x86)\StorageCraft\ImageManager" folder.

- 1) Stop the ShadowControl ImageManager service
- 2) Delete the ImageManager.mdb
- 3) Start the ShadowControl ImageManager service once more.

When the service starts, it creates a fresh ImageManager.mdb database and starts the process of reviewing the files present and updating the status of them. After it's created the new database, it begins it's daily processing and verification tasks once again.
